

RSA-1 Offers a Third Investment Option

The Short Term Investment Fund (STIF) provides liquidity and preserves capital by reducing exposure to market volatility. Typically, short-term investments encounter less market risk than do stocks and bonds because of their short duration. Therefore, they usually provide a lower rate of return than investments in those categories.

Investments under this option could include high-quality money market securities, U.S. Treasury bills or notes, and U.S. government agency notes with a maturity of one year or less.

An investment in a STIF account is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although this investment option seeks to preserve the value of your investment, it is possible to lose money by investing in the fund.
